

Enhancing Business...

Invent Opportunities

A unique business requires unique business solution which is very different from the common on-the-shelf products. Bespoke application and custom software enables the organization to achieve common business objectives through unique business processes.

Benefits:

No unexpected pitfalls:

Engagement is not regarded as "side work," but is considered a planned activity.

Time efficiency:

All activities required during engagement are fully described and can be planned in advance, which optimizes delivery duration.

Elimination of "Hidden costs" of engagement:

Transparent cost structure of an engagement. Through detailed planning, our model eliminates unnecessary activities which may lead to extra costs.

Effective knowledge transfer:

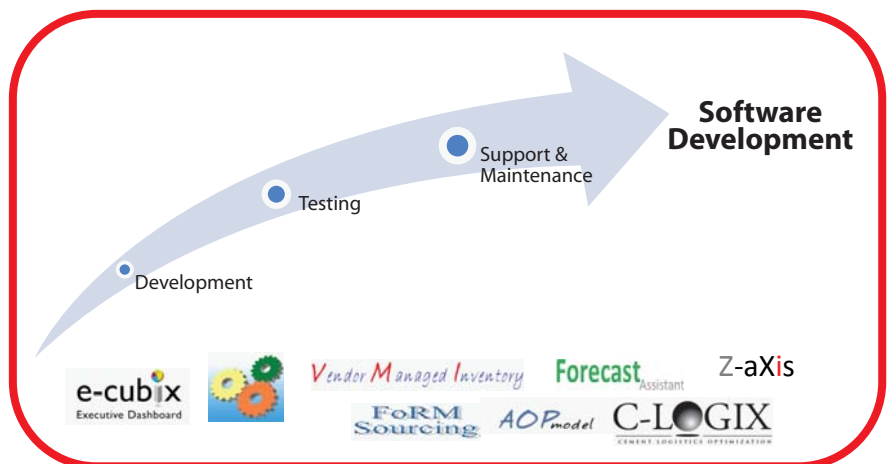

Exhaustive Documentation as per standards specified (ISO/clients specified). Special knowledge transfer sessions for smooth information delivery to organization

Risk reduction:

Clear communication by providing early guidance through the entire engagement in order to minimize risks for both parties.

INTEGERZ believe technology and business work hand in hand. We have expertise in both domain and technology, this enable us to deliver technology solutions.

Development

- Application Development
- Outsourced Product development and Research
- Code Optimization

Testing

- Application Functional Testing Services
- Application Security Testing Services

Support & Maintenance

- Application Migration Services
- Data Services
- Application Maintenance Services

Advantage:

- Proven process for defining and managing requirements
- Powerful set of Project Management tools
- Proven track record of delivering several Custom Applications to various clients globally
- High quality of deliverables
- Reduce Cost of migration and turn-around time by 40-50%
- Dedicated Migration specialist INTEGERZ accurate code transformation
- Complete transparency and monitoring of application migration process
- Consultancy over technology and platform suitability
- Data cleaning carried out off-shore at a much reduced cost with better Quality
- Overall saving in operation cost
- Free strategic resource for new solution
- Diversify & expand business operation

Application Development Service

Applying current and best technology practices and methods including the .NET Web & Windows services technologies to achieve business transformation.

Application Migration Services

Help clients to convert hosted applications from classic ASP, PHP, etc to .NET platform

Application Functional Testing Services

Help minimize defects in your application development and maintenance. We formulate test strategy, test planning, execution, and defect analysis & risk assessment

Application Security Testing Services

Adopts a customized approach towards assessing its security which can never be automated. I-SECURE SOLUTIONS technical consultants discover vulnerabilities that actually affect your business.

Outsourced Product development and research Services

Team of experts is technologically equipped and flexible enough to undertake the challenges of Product Development and handle constant evolution of a software.

Code Optimization Services

Armed with holistic knowledge and deep insight into coding we deploy our code libraries, refined and standard coding practices to revamp coding to have breakthrough performance.

Data Services

We help in providing the resources and experience to offer integrated data services. We establish ourselves as an extended arm of the client and not as an external agency to seamlessly deliver efficiencies in production and cost.

Application Maintenance Services

Our Application maintenance service gives enough space to the CTO/COO to stretch and focus on strategic application development and enhancement, while still effectively meeting the needs of existing clients.

Application Hosting Services

INTEGERZ hosting services allow you to take advantage of enterprise solutions without having to invest in the traditional cost of owning enterprise solutions
